

To run xlaunch, make sure you run in fullscreen:
Step1:

Display settings ✕

Select display settings
Choose how VcXsrv display programs

☐ Multiple windows

☒ Fullscreen

☐ One large window

☐ One window without titlebar

Display number
(Specify -1 to let vcxsrv automatically choose one)

< Back

Next >

Cancel

step2:

Select how to start clients

☒ Start no client
This will just start the xserver. You will be able to start local clients later.

☐ Start a program
This will start a local or remote program which will connect to the xserver. You will be able to start local clients later too. Remote programs are started using SSH.

☐ Open session via XDMCP
This will start a remote XDMCP session. Starting local clients later is limited. This option is not available with the "Multiple windows" mode.

< Back **Next >** Cancel

step3:

disable access control or add your personal keys (not required)

Extra settings

☒ Clipboard
Start the integrated clipboard manager

☒ Primary Selection
Also map the PRIMARY selection to the windows clipboard.

☒ Native opengl
Use the native windows opengl library (wgl). Make sure to export the LIBGL_ALWAYS_INDIRECT environment variable.

☒ Disable access control
Use this when you want vcxsrv to accept connections from all clients.

Additional parameters for VcXsrv

< Back Next > Cancel

once you run the script to start the app the screen with the app will appear in fullscreen if everything is working right.
